

We demonstrate the Future of Digital Workspace and Wide Area Networks at ITAC 2018 - blueAPACHE

Canonical: <https://www.blueapache.com/blog/blueapache-demonstrates-future-digital-workspace-wide-area-networks-itac-2018>

Details:

The focus of the event for blueAPACHE & our key partner Citrix, was to highlight the importance of securing the future of digital workspace technologies for Aged Care providers. Throughout the conference, live at the blueAPACHE stand – delegates were able to witness a demo of the Citrix Digital Workspace, which fully aggregates all apps and data across all applications — both on-premises and cloud — to deliver the right experience, to the right user at the right time, and on any device. Pivotal to the aged care space, it enables providers to become more agile, more efficient, and provides the ability to securely deliver applications & data to their workforce regardless of where the app is hosted creating an almost effortless user experience. A common topic that came up in conversation with many delegates was the challenges faced around delivering cost effective internet bandwidth to their regional facilities. In an age where the next generation of residents are looking to have access to bandwidth-heavy services such as social media, music, and video content streaming services, there is more pressure than ever on IT to be able to deliver these services effectively & efficiently. As a telco carrier, and the IT provider of choice for number of Aged Care organisations, we are well versed in providing solutions to some of the challenges typically faced by some regional aged-care facilities. One of the solutions we've delivered to a number of clients in similar scenarios is the Citrix Software Defined Wide Area Network (SD-WAN). During the conference, we wowed the delegates with a live demonstration displaying ease of deployment, management & capability. Because we can deliver internet services using the last mile of any provider, we're able to deliver high bandwidth internet services to any remote facility using an aggregated combination of business grade MPLS data services along with multiple, consumer grade, high bandwidth services such as NBN. This means the blueAPACHE & Citrix SD-WAN solution can be delivered at a considerably lower cost, with uncontended redundancy, and with managed security at the edge. blueAPACHE & Citrix would like to thank the organisers of ITAC for hosting a successful & enlightening event, it was a fantastic opportunity to meet other great providers within this exciting space, as well as the delegates who we look forward to continuing discussions with in more depth. If you would like to learn more about our SD-WAN and Citrix workspace solutions for your organisation today, please don't hesitate to contact one of our specialists.

What was your participation at ITAC 2018?

blueAPACHE, along with its key partner Citrix, exhibited at the IT in Aged Care (ITAC) 2018 conference, where they highlighted the importance of securing the future of digital workspace technologies for Aged Care providers and gave live demonstrations at their stand.

Where and when was the ITAC 2018 conference held?

The ITAC 2018 conference was hosted at the Adelaide Convention Centre in November 2018.

What was the theme of the ITAC 2018 conference?

The theme of the conference was 'Co-Designing our Digital Future,' emphasising the importance of assistive technology in supporting service quality and independence in aged care.

What technology demo did blueAPACHE showcase at its ITAC 2018 stand?

We showcased a demo of the Citrix Digital Workspace, which aggregates all apps and data across on-premises and cloud applications to deliver the right experience to the right user at the right time on any device.

What common challenge did ITAC 2018 delegates raise with you?

Many delegates discussed the challenges of delivering cost-effective internet bandwidth to their regional aged care facilities, especially as residents increasingly demand bandwidth-heavy services like social media, music, and video streaming.

What SD-WAN solution did you demonstrate at ITAC 2018?

We demonstrated the Citrix Software Defined Wide Area Network (SD-WAN) solution, showing its ease of deployment, management, and capability.

How does your SD-WAN solution deliver high bandwidth to remote facilities cost-effectively?

We deliver internet services using the last mile of any provider, aggregating business grade MPLS data services with multiple consumer grade, high bandwidth services such as NBN, allowing the blueAPACHE & Citrix SD-WAN solution to be delivered at a considerably lower cost, with uncontended redundancy and managed security at the edge.

Who is your key technology partner mentioned in relation to the ITAC 2018 event?

Citrix was our key partner at the ITAC 2018 event, collaborating on the Digital Workspace and SD-WAN demonstrations.

How can someone learn more about your SD-WAN and Citrix workspace solutions?

The article invites readers to contact one of our specialists via the contact page to learn more about their SD-WAN and Citrix workspace solutions.
