

We integrate to NBN - blueAPACHE

Canonical: <https://www.blueapache.com/blog/blueapache-integrates-to-nbn-2>

Details:

2014

Last week, we connected our emPOWER Cloud and emPOWER Network directly into the Federal Government National Broadband Network (NBN). For those connected to the NBN, you should see improved speeds (subject to your network connection) across the full spectrum of our converged services. Customers in roll out areas, can now leverage the NBN infrastructure to realise the potential of Software as a Service (SaaS), Infrastructure as a Service (IaaS) and Platform as a Service (PaaS) services by directly connecting to the emPOWER Cloud over high speed and high availability fibre connections. Chris Marshall, CEO at blueAPACHE, said "We are thrilled to be able to leverage the Government's NBN initiative to provide increased accessibility to the entire blueAPACHE range of converged services, including IT as a Service.

"Our network integration means more customers across disparate locations can not only benefit from the broad range of technology services blueAPACHE provides, but also improve capability through access to improved point to point technologies like telephony and unified collaboration."

The NBN is a Federal Government initiative to ensure all Australians can choose high-speed broadband. A network of fibre to the premise services is being rolled out across Australia on a region-by-region basis, to 93 per cent of premises. This will enable more businesses to leverage emerging technologies like Cloud , Unified Communications and Managed Services , realise the many benefits of Converged Solutions . For more information on how we can help you maximise the business benefits of your NBN connectivity, contact our account team .

What did you announce in this blog post about NBN?

We announced that it had connected our emPOWER Cloud and emPOWER Network directly into the Federal Government National Broadband Network (NBN).

What benefit does the NBN connection provide to your customers?

Customers connected to the NBN should see improved speeds, subject to their network connection, across the full spectrum of our converged services.

How can customers in NBN roll out areas benefit from this integration?

Customers in NBN roll out areas can leverage the NBN infrastructure to realise the potential of Software as a Service (SaaS), Infrastructure as a Service (IaaS) and Platform as a Service (PaaS) by directly connecting to the emPOWER Cloud over high speed, high availability fibre connections.

What did Chris Marshall, CEO at blueAPACHE, say about the NBN integration?

Chris Marshall said we were thrilled to leverage the Government's NBN initiative to provide increased accessibility to the entire our range of converged services, including IT as a Service, and that the network integration means more customers across disparate locations can benefit from our technology services and improve capability through access to improved point-to-point technologies like telephony

and unified collaboration.

What technologies does the NBN rollout enable businesses to leverage, ?

The NBN rollout enables more businesses to leverage emerging technologies like Cloud, Unified Communications, and Managed Services, and to realise the benefits of Converged Solutions.

Who should customers contact for help maximising the business benefits of their NBN connectivity with you?

Customers should contact our account team for more information on how we can help maximise the business benefits of their NBN connectivity.
