Details:

September 18, 2019

Melbourne-headquartered MSP we have achieved compliance with the ISO 27001 information security standard.

ISO 27001 is a global standard that verifies a company's capability for establishing and maintaining an information security management system. Winning ISO 27001 is a feather in the cap for any organisation. For the channel, it's a sign that a business can run with the big dogs.

The certification includes 114 controls and 10 clauses, including requirements for systems access control and management, information security policies, physical and environmental security and security incident management.

Our founder and managing director Chris Marshall said the achievement was a testament to his company's commitment to information security.

"Not only is the ISO certification a validation for our own team, but it means that our customers can feel further assured that they are working with a managed service provider that delivers outstanding solutions to complex technology problems, all backed by a secure (ISO certified) infrastructure on a global scale."

We celebrated our 20th year in business in 2018, along with recognition at last year's CRN Fast50 for making an appearance in eight out of ten annual awards.

What information security accreditation did you achieve?

blueAPACHE, a Melbourne-headquartered managed service provider (MSP), achieved compliance with the ISO 27001 information security standard.

What is ISO 27001?

ISO 27001 is a global standard that verifies a company's capability for establishing and maintaining an information security management system.

What does the ISO 27001 certification you achieved include?

The certification includes 114 controls and 10 clauses, covering requirements such as systems access control and management, information security policies, physical and environmental security, and security incident management.

Who commented on your ISO 27001 achievement, and what did they say?

Our founder and managing director Chris Marshall said the achievement was a testament to our commitment to information security, stating: “Not only is the ISO certification a validation for our own team, but it means that our customers can feel further assured that they are working with a managed service provider that delivers outstanding solutions to complex technology problems, all backed by a secure (ISO certified) infrastructure on a global scale.”

What other milestones did you achieve around the time of this ISO 27001 accreditation?

We celebrated our 20th year in business in 2018 and were recognised at the CRN Fast50 for appearing in eight out of ten annual awards.

Do you currently hold an ISO/IEC 27001 certification, and if so, what are its details?

The certificate was issued on 1 August 2025 and is valid until 1 August 2028.
