Named products or vendors	Veeam, HPE, Hewlett Packard Enterprise

Article

As a key sponsor of this year's VeeamON Forum, we continue to share industry best practices, insights and new ideas delivered "as a Service"under our IT as a Service (ITaaS) framework. The event connects industry experts and organisations with the opportunity to learn how other organisations are able to ensure continuous availability for any data, any application, on any cloud. blueAPACHE General Manager of Technology, Michael Zuppa, was a guest speaker at the panel discussion during the Business Breakout session, where he had the opportunity to discuss the availability and compliance outcomes our partnership with both Veeam and HPE has been able to deliver to some of Australia's leading companies. At this panel discussion, Brett Lobwein, Business Manager, Data and Storage Optimisation at Hewlett Packard Enterprise and Asanga Wanigatunga, Senior Director Cloud and Service Providers at Veeam, spoke candidly with Michael about how we have successfully helped our client, McConnell Dowell, integrate "always-on" data availability into their multi cloud environment. The discussion panel delved into questions such as, what the business and compliance challenges of such organisations were, and the unique value benefits that comes from collaborative partnerships such as BlueApache, HPE, and Veeam? This partnership has helped businesses minimize disruption from down time and keeps organizations, such as McConnell Dowell's environment "always-on". We pride ourselves on delivering business outcomes using our marketing leading ITaaS approach for our clients. Delivering Always-On Cloud Availability across multi-cloud environments is the new normal.
