Details:

Melbourne, 20 February 2025 — We are partnering with IT Architect as a Service (ITAaaS) to combine its independent digital business architecture and strategic IT advisory expertise with our technology delivery capabilities. Together, we help organisations plan for AI, automation and cybersecurity.

A Partnership Built on Independence and Expertise

In today's rapidly evolving technology landscape, organisations need independent, unbiased advice to make informed IT decisions. ITAaaS was founded to provide exactly that—strategic guidance free from vendor influence or service delivery obligations. While ITAaaS operates independently, the partnership with us enhances its ability to reach a broader market and offer clients access to additional infrastructure and support where required.

"Our mission is to help businesses evaluate technology investments with true independence," said Patrick Devlin, Managing Partner at ITAaaS. "Through our partnership with blueAPACHE, we can extend our impact while maintaining our commitment to vendor-neutral advisory services. Our clients benefit from strategic expertise without sales-driven agendas."

Chris Marshall, Founder & Managing Director within our business, also emphasised the significance of the partnership: "The demand for independent advisory services has never been greater. Businesses face a maze of AI, automation, and cybersecurity challenges, and ITAaaS provides the unbiased strategic guidance they need. By working together, we ensure organisations receive both world-class advisory and access to the enterprise-grade infrastructure and services they require."

Addressing Key IT Challenges with Unbiased Advisory

As businesses embrace AI and automation, they face significant challenges in ensuring data integrity, managing regulatory risks, integrating new solutions, and navigating a rapidly expanding vendor ecosystem. ITAaaS offers expert guidance to address these challenges, ensuring businesses optimise their technology strategies without vendor lock-in.

Key advisory services provided by ITAaaS include:

Virtual Platform Assessment – Evaluating infrastructure readiness for AI and automation.

AI Discovery Workshop & Proof of Value (PoV) – Helping organisations assess the real-world impact of AI solutions before full-scale investment.

IoT and OT Assessment – Addressing security and integration concerns in operational technology environments.

Cybersecurity Assessment – Ensuring compliance and mitigating risks in an evolving threat landscape.

Hybrid Continuity and Recovery Assessment – Strengthening business resilience and disaster recovery strategies.

Developing Data Governance Frameworks – Establishing policies and best practices to ensure data quality, compliance, and security for AI-driven initiatives.

The ITAaaS Advantage: True Independence in IT Strategy

ITAaaS combines the large-scale experience of a leading Australian MSP with the agility and competitive pricing of a smaller firm, offering high-quality outcomes at lower risk. Our approach is more nimble than that of larger consulting firms, better resourced than boutique consultancies, and fully independent—allowing us to focus exclusively on your project without the competing demands of broader service delivery. For organisations seeking independent, expert-driven IT strategy without vendor influence, ITAaaS offers a trusted, objective approach to maximising technology investments. Our clients receive tailored guidance that fits their unique business goals, ensuring they make smarter technology decisions with confidence.

Looking Ahead: The Future of IT Advisory Services

As AI, automation, and digital transformation continue to evolve, businesses need independent, strategic guidance more than ever. ITAaaS remains committed to empowering organisations with the insights they need to navigate this complex landscape, drive innovation, and future-proof their IT investments.

About IT Architect as a Service (ITAaaS)

ITAaaS is a team of highly skilled IT professionals with decades of experience across multiple industries. Our expertise spans senior in-house technology leadership roles, including Chief Technology Officers (CTOs) and IT strategists, as well as deep knowledge of leading technology vendors. ITAaaS provides truly independent advisory services, helping organisations optimise IT investments and mitigate risk while staying ahead of emerging technology trends.
