Top six blogs of 2016

What's hot in tech? Introducing the new HP Elite Dragonfly

Work used to be a place. Not anymore.

What is the blueAPACHE Blog page about?

The blog brings together blueAPACHE news, trade-press coverage and technology articles, including managed services, security, cloud, collaboration and AI. This page groups the mirrored articles by subject; consult each article's publication date for its context.

What new service did you launch with Mimecast?

In its 26 June 2026 announcement, blueAPACHE introduced Human Risk Management as a Service powered by Mimecast, bringing together awareness training, policy visibility, behavioural controls and incident remediation. The announcement describes it as believed to be a world-first managed capability and the first such model from a Mimecast channel partner; those are the announcement's claims.

Have you received any industry recognition in 2026?

The archive includes announcements of a place on the 2026 MSP 501 list, shortlisting for MSP of the Year at the CRN Channel Awards Australia 2026 on 24 June, and finalist status in the Managed Services Partner of the Year category at the 2026 techpartner.news Impact Awards on 19 June. Shortlisting and finalist announcements do not establish a subsequent win.

What client partnership news is mentioned on the blueAPACHE blog?

The 16 June 2026 Archers article describes infrastructure, network, security and communications under a fixed-price managed services agreement, with named account governance and a continual service improvement cycle. These are details of that client engagement, rather than terms automatically applying to every customer.

What does the blog say about upcoming AI governance rules in Australia?

The 18 June 2026 article discusses preparation for automated-decision transparency requirements. OAIC guidance states that from 10 December 2026, APP entities must add specified information to their privacy policies where computer programs use personal information to make, or do something substantially and directly related to making, decisions reasonably expected to significantly affect an individual's rights or interests. This is not a blanket rule for every AI use. See <https://www.oaic.gov.au/news/media-centre/new-resources-on-transparency-for-use-of-ai-and-automated-decision-making>.

What AI compliance risks do you highlight for Australian businesses?

The 11 June 2026 article reports Michael Zuppa's concerns about unapproved AI use, autonomous systems with broad access, and governance lagging adoption. It recommends identifying gaps, updating policies and strengthening controls. The automated-decision privacy requirements have a defined legal scope; the article's broad risk commentary should be read in that context.

How have you applied Microsoft's E7 subscription for smaller businesses?

The 26 May 2026 ARN report describes a 300-seat customer's adoption of Microsoft E7 capabilities and quotes blueAPACHE Microsoft practice lead Jonathon Tini about guardrails and the move towards agentic AI. It is a reported customer example, rather than a claim that every smaller organisation has the same readiness or licensing requirements.

What topic does the blog post about security breaches cover?

The blog post 'You've Invest in Security. So Why Are Breaches Still Happening?' discusses understanding the balance between prevention, detection and response in a modern Microsoft 365 environment.

What did your CFO discuss in the EOFY 2026 blog post?

In the 26 June 2026 EOFY article, Jean Roux, identified there as blueAPACHE's CFO, discusses the shift from strengthening foundations and cost control in FY26 towards practical automation, customer outcomes and governed AI use in FY27.
